

Final Report of Functional and Non-functional Requirements of Digital Parking Permit System

4 Functional requirements of the project:

- 1 Authentication of each vehicle. Fields to fill: taking their license plate number, the driver's full name, phone number and registration time.
- 2 The guards gets notification in system that a car is in waitlist of getting approvement.
- 3 Driver is able to log in into the system and see the live procedure of permit.
- 4 Final message comes as a notification to driver, if procedure is failed or successful

2 non-functional requirements:

- 1 The program must load in 10 seconds after getting approval.
- 2 Each registration must be recorded in PostgreSQL database, database should be cleaned automatically each week.
